

WORDS OF VISIONARIES

SESSION: JOURNEY OF AMAZON AND ITS FOUNDER – JEFF BEZOS

23-May -2025

Dreamers & Innovators is a knowledge and skill-building platform for 21st century learners. We aspire, design and execute interactive learning experiences where global knowledge relevant to today and tomorrow is brought to young Dreamers. At D&I, 21st century skills are honed, confident communication is developed and independent, informed opinions are nourished.

WHAT I THINK MY ROOM WILL HAVE IN 2025

By: Abir Khorana, 11 years

In 10 years my room will have beds that fold and merge with the wall of the room. I would have my room's atmosphere like my mood. The light, music will be like how I feel.
My robots will be doing things like giving me snacks and when I tell them to "play a movie" a screen will pop up and when I want to sleep it will turn on calm music.
And I want to play games.
It will make my study table into what ever I want!
And that's how I want my room to be in 10 years.
Time flies
Peace

WHAT I LEARNED FROM THE JOURNEY OF JEFF BEZOS

The things I learned from Jeff Bezos was that keep your mindset in the future because who knows what can happen in the future and when we should work hard we won't need to follow success, success will follow us.
We should always keep the craze to learn something new whenever we can.
We should apply our minds at the right areas such as innovation.
We should always dream big and work hard for everything we get, because you need to put your mind at the right place and not be lost because if we are lost we won't be able to achieve the goals we set for ourselves.
And that's what Bezos did to become one of the owners of one of the richest companies today.

LEARNINGS FROM JEFF BEZOS

By: Rohan Tikku, 10 years

Jeff Bezos is the founder of Amazon. He founded Amazon in 1994 as an online bookstore from his garage. He faced many challenges but didn't give up. With big thinking and planning he turned Amazon into an "Everything Store" whose main focus was its customers. The key lessons I learnt from this success story is don't be afraid to think big, keep looking at the future and make a plan to achieve it. During the way challenges will come, but never stop and give up. Instead change, alter your plans according to the situation and overcome your challenges.

MY THOUGHTS ABOUT MY SCHOOL 10 YEARS LATER!!

I think my school will have RGB lights in classrooms. Classrooms will have more comfortable furniture, robotic teachers, pens that will write for you, books that are digital. A new class about gaming having gaming computers and gaming chairs. There is no fixed uniform and sports like football, cricket, ping pong, tennis, badminton, swimming etc be given equal importance as digitalised academics

May 2025 at D&I shines a spotlight on Big Brands, with a special focus on Amazon and the inspiring story of Jeff Bezos. This module is designed for kids aged 10 and up, but it's about much more than just facts — it's about building a foundation to explore bigger ideas, even touching on intense geopolitics down the line. Before all that, though, the most important part is a shift in mindset: showing that learning can actually be fun and effective. To wrap things up, Dreamers and Innovators lead a series of quizzes and activities that bring everything to life.

HOW MIGHT WE TRAVEL IN 20 YEARS?

By: Ira Kohli, 13 years

In 20 years, I think travel will be totally different—and way more exciting! Instead of just using cars, planes, and trains, we might be flying in personal air taxis or even teleporting short distances using advanced quantum tech (yeah, I said it—teleportation!).

Self-driving cars will be everywhere, and they'll be electric and super smart. You could hop in, tell it where you want to go, and then chill, play games, or even nap while it drives you safely. Roads might glow in the dark or charge your car as you drive.

But here's where it gets wild: I think space travel will be a thing for regular people, not just astronauts. Maybe we'll take weekend trips to orbiting space hotels or go moon camping! Rocket ships will be faster, cheaper, and reusable like buses.

Also, virtual travel could become super realistic. With advanced VR and maybe brain-computer interfaces, we could feel like we're walking on a beach in Hawaii or climbing Mount Everest without ever leaving our homes.

WHAT I LEARNED FROM THE JOURNEY OF JEFF BEZOS

My learning from Jeff Bezos is to never give up, always dream big, do those dreams, don't be scared to be different. Be a dreamer. Do things that are different, innovative and are gonna make sure you're known, not for your intellect or ideas but for your personality, your dreams, your self and not some copycat.
